

Birdex

Birdex

PRESENTED BY :
Circuit Breakers

MakerMania

PROBLEM

- Current bird monitoring systems only identify species from sounds and provide basic logs. Users lack behavioral insights, predictive information, and engaging ways to interact with wildlife data. An AI-powered smart bird monitoring system can transform passive bird detection into an interactive, predictive, and educational experience.
- A smart bird monitoring system that uses Birdex to identify bird species from their calls and displays detections on a dashboard. The system goes beyond simple identification by incorporating predictive analytics, wildlife behavior analysis, gamification, interactive bird attraction, and generative AI art creation.

SUBSTITUTE

Human observation with binoculars

AI-powered acoustic monitoring using Birdex

Users manually identify birds from books/apps

Automatic species recognition from audio recordings

Simple detection logs

Real-time behavioral insights, alerts, and predictions

COMBINE

- + IoT Wildlife Monitoring
- + Weather Forecast APIs
- + Pokémon GO-style Gamification
- + Behavioral Ecology Research
- + Smart Speaker System

Automatic bird identification

Forecast future bird activity

BirdDex Collection System

Detect territorial disputes

Bird attraction through social calls

ADAPT

From Smart Home Systems

Adapt:

- Real-time alerts
- Notifications
- Event-based monitoring

Example:

"Owl detected at 2:15 AM"

From Pokémon GO

Adapt:

- Collection mechanics
- Achievement badges
- Rarity systems

From Security Cameras

Adapt:

- Motion-event style alerts

Example:

- "Rare bird entered observation zone"

MODIFY

Transform the dashboard from:

Species Log to **Wildlife Intelligence Dashboard**

Add:

- **Heat maps**
- **Activity timelines**
- **Migration trends**
- **AI summaries**

PUT TO ANOTHER USE

Biodiversity Monitoring

- Measure ecosystem health

Conservation Research

- Track endangered species

Urban Planning

- Study impact of city development on bird populations

Agriculture

- Detect pest-eating birds
- Monitor ecosystem balance

Education

- Interactive learning tool for schools

Tourism

- Birdwatching parks
- Eco-resorts
- Wildlife sanctuaries

Climate Change Studies

- Track migration pattern changes

Last Moment Change:

- Using this sound based idea, sir told to disable sound systems which exceed sound level limits.

ELIMINATE

Manual Observation

- Birds are detected automatically

Knowledge Barrier

- Beginners can participate

Missed Sightings

- 24/7 monitoring catches rare events

Data Fragmentation

- Store all observations in one dashboard

Passive Birding

- Transform users into active participants

REVERSE
